Summary

Passionate NodeJs/JavaScript developers who is always seeking to learn new things about the technology and built projects related to it

Experience

iServeu Technology Private Limited | Bhubaneswar, Odisha Software Engineer Trainee | 07/2023

My main job here is to make apis and that can be of any type whatever the requirements are provided by the company or clients. For example, I was into one of the projects where each client should get a unique qr code with certain data embedded in it. I played a key role in that project. Secondly, I have to make APIs that will fetch data from the database and prepare reports for the same. Last but not the least I look into each and every type of bugs that arises in any certain apis.

iServeu Technology Private Limited | Bhubaneswar, Odisha Software Engineer Intern | 02/2023 - 07/2023

During internship days I went through the basic knowledge of Nodejs. Built different projects like todo application, real-time chat application using socket.io. How node mailer works etc.

Skills

Node.js, Git, React(ongoing), JavaScript, MongoDB, Redis, Express.js, Google Cloud Platform

Education

SR DAV PUBLIC SCHOOL PUNDAG RANCHI

Trident Academy of Technology | Bhubaneswar, Odisha Computer Science Engineering, | 07/2023

SR DAV PUBLIC SCHOOL PUNDAG | Ranchi, Jharkhand Secondary Education | 05/2019

Projects

- 1 Attendance Monitoring application - Firstly an API was made by me through which every client received a QR code and there was a dedicated application to scan that QR code. As soon as the QR code is successfully scanned, all the details get stored into the database. After that to keep track of each and every attendance, I made an API which fetches all the required data.
- 2 PubSub Application - Where whatever data comes into the stream gets stored inside the database. In my case, as there were lots of transactions happening on a daily basis, all such data needs to be stored in the database.
- 3 HeartBit API - Integrated Heart Bit API in each and every project so that it can track all the APIs that are running in production environment. Basically, if any API faces any server-related or database issue through this API, we track all these types of critical problems.
