EXPERIENCE

Cansvolution – *Senior Software Engineer*   NOV 2023 – March 2025

- Design and develop highly responsive user interface components using **Angular**.
- Create reusable components and front-end libraries.
- Oversee development milestones from inception to completion.
- Implement logic in accordance with **Jira** issues for the project.

Intelliatech Solutions – *Angular Developer*   SEP 2022 – MAY 2023

- Created and launched responsive UI **components** utilizing Angular.
- Constructed reusable components and front-end libraries.
- Directed development phases from initial concept through to project completion.
- Developed solutions in response to Jira issue requirements.

OEPP Innovation Pvt Ltd – *Software Engineer*   FEB 2021 – JUN 2022

- Integrated and maintained **API**s to UI and Designed UI for application in **Angular**.
- Deployed and configured application on testing and production servers.
- My role is on admin modules, Design the pages, Integration of the API's and Resolve the bugs.
- Wrote unit test cases using **Jesmin & Karma**.

PROJECTS

QR Restaurant Project

- Developed a mobile-friendly QR-bases food ordering system using Angular with dynamic menu rendering and cart management.
- Integrated **PhonePe payment gateway** for seamless online transaction and handled user input validations.
- Implement WhatsApp API to send automated order confirmations with PDF bill and feedback link.
- Built an admin dashboard to manage menu items, track orders, handle cash payments, and view feedback.
- Enabled real-time order status updates and past order history for efficient restaurant management.
- Designed and optimized a responsive UI/UX for both customer and admin interfaces.
- Tech Stack: Angular, NodeJS, RxJS, JavaScript, MongoDB.
- **Description:** This application is designed for restaurants, where a QR code is placed on each table. When customers scan the QR code, they can view the food menu and create their orders directly from their devices. The application also includes payment integration and additional features to streamline the dining experience. It enhances convenience for both customers and restaurants by digitizing the ordering and payment process.

Moniwell

- Developed a responsive single-page application for web and mobile using Angular.
- Integrated **RESTful** services.
- Implemented reusable Angular components to optimize development efficiency.
- Ensure cross-browser compatibility and optimized performance for faster page loading.
- Worked closely with backend developers to define API contracts.
- Enhanced UI/UX by implementing interactive data visualization components.
- Debugged and resolved UI issues to improve overall application performance.
- Tech Stack: Angular, NodeJS, RxJS, JavaScript, PostgreSQL.
- Description: **Moniwell** transforms employer communication with a cutting-edge platform that optimizes benefit usage through personalized, psychology-driven content. By delivering timely, engaging text messages, we ensure employees feel connected and informed. Our approach empowers people to feel better about money, leading to better financial decisions. We offer AI-driven, personalized money

journeys that focus on the emotional aspects of money using scientifically developed, psychology-based messaging.

Employee Portal

- Worked on responsive design and developed a single responsive website that could be served to desktop, tablets and mobile users using Angular.
- Integrated RESTful APIs to handle employee data such as leave requests and attendance.
- Wrote unit test cases using **Jesmin & Karma** to ensure code quality and reliability.
- Optimized data binding & state management to enhance application efficiency.
- Implemented form validations for secure and structured data entry.
- Tech Stack used Angular, RxJS, Angular Material, NodeJS and JavaScript.
- Description: **Employee Portal** facilitates automation across departments, especially in the Human Resources (HR) team. Most HR activities, such as requesting leave, marking attendance, and handling permission requests, are managed through online portals. These Employee Self-Service (ESS) portals enable employees to perform these tasks independently, saving time and effort for the HR department.

HRTrails

- Developed a responsive UI for the HR platform, focusing on payroll, recruitment, and attendance management.

- Implement reusable components to improve scalability and maintainability.
- Integrated APIs to fetch employee payroll and attendance records from the backend.
- Optimized UI performance to ensure smooth navigation across different HR modules.
- Performed code reviews to maintain clean, modular, and optimized code
- Tech Stack involved Angular, TypeScript, NodeJS, MySQL, RxJS and JavaScript.
- Description: **HRTrails** is recruitment, attendance, payroll, task management, and communication system bundled. It was founded with a vision to streamline end-to-end HR processes for various industries so that they can focus on their core business.

EcomTrail

- Developed an interactive and scalable UI for the e-commerce platform.
- Integrated **API**s for product listing, cart management, and order processing.
- Designed product pages, checkout pages, and user dashboards with a seamless experience.
- Implemented search and filtering functionality to improve product discoverability.
- Ensured mobile responsiveness for smooth user interaction on all devices.
- Optimized front-end performance by reducing API calls and implementing lazy loading.
- Ensured secure user authentication using Angular security best practices.
- Tech Stack: Angular, TypeScript, NodeJS, MySQL, RxJS and JavaScript.
- Description: **EcomTrails** is an eCommerce platform for any business that desires to sell goods online. It's a very detailed mobile and web application that can effortlessly integrate into an online business; be it trades from business to business(b2b) or business to consumers(b2c). our goal is to help your business reach out to the interested buyers out there.

TECHNICAL SKILLS

Angular | JavaScript | HTML5 | CSS | RxJS | Angular Material | TypeScript | jQuery | Npm | Bitbucket | NodeJS | Git | GitHub | Jira | MySQL | PostgreSQL

EDUCATION

BE (Electronics & Communication Engineering) – from **RGPV University**, Bhopal. 2011-2016
